

AI Producer Release Notes

2024.3B

Features & Improvements

AI Producer Control Room

AI Producer now comes with a dedicated Control Room view. In this first release, the Control Room supports Prepare, Start, Stop, Break, Manual Mode, providing an extended overview and faster selection of formats, layouts, and videos. It also provides you with direct access to your Rundown, allowing you to quickly add, remove, change order, and change settings of your segments.

The Control Room can be accessed either from your meetings overview, or from the existing Control Panel.

For more information regarding the AI Producer Control Room, please follow this [link](#).

In coming releases, the Control Room will be further improved to support Q&A, messages, troubleshooting options, and more. There will also be a tighter integration between changing settings before the meeting and during the meeting.

Further enhancements to the Control Room will also include numbering of speakers and live speaker snapshot previews. Aside from additional features, there will be further performance improvements in which the delay for the live view in the Control Room will be minimized together with overall shorter response times when producing your broadcast.

Please contact us if you are interested in a demo of AI Producer, including our upcoming features.
