

# AI Producer Release Notes 2025.1

## Features and Improvements

### Updated AI

We've made updates to the AI function to ensure an even more natural automatic layout selection. With these improvements to the standard AI mode, the tempo function has been removed.

### Save to OneDrive as Default

Meetings in AI Producer can now be set up to automatically have OneDrive enabled as a default destination. This can be easily configured in the administration portal by setting up a profile. With this update, you can not only make OneDrive available as a destination option but also ensure its enabled by default for all meetings using that profile.

### Live View Refresh Function

To give Producers the best possible oversight, we've introduced a Refresh function available in both the Control Room and the Control Panel. This feature ensures that, regardless of network conditions, the Live View can be easily refreshed to minimize any delays between what's displayed and the actual live content.

## Test Bots

The best way to get comfortable with AI Producer is to experiment and test different scenarios. To create a realistic live production experience, having participants in your test sessions is key. Now, we've made it even easier by introducing seven Test Bots—so you don't have to invite colleagues every time. Simply add test1@livearena.com, test2@livearena.com, and so on to your meeting. Then you just admit each bot one by one in Teams. A hassle-free way to practice and refine your workflow!

## Produced Meeting

The Produced Meeting format has been improved to now also allow only an active speaker box together with a shared screen.

In addition to these improvements, several minor bugs have been resolved.

For more information regarding the AI Producer Control Room, please follow this [link](#). Please contact us if you are interested in a demo of AI Producer, including our upcoming features.
