

# AI Producer Release Notes

2025.1.2

## Features & Improvements

### New Default Layouts

The default layouts in AI Producer have been updated: Screen share windows are now positioned on the right and appear proportionally larger than presenter windows. When a screen share is active, presenter windows are left-aligned and arranged horizontally.

For a full overview of all layout updates, click [here](#).

### Mute Button in Control Room Moved

The mute button in the Control Room has been moved to the left side.

### Select/Deselect All for Active Speaker Boxes

You can now add or remove all available Presenters at once when selecting who should appear in an Active Speaker Box.

### Broadcast Automatically Unmutes After Video Segment

If a video segment or ad-hoc video is played while the Production is muted, the system will now automatically unmute the Production at the start of the next segment.

### Logo Selection for Q&A

In addition to customizing the Q&A attendee page title, you can now optionally add a logo to be displayed at the top of the Q&A attendee page. This is configured in Pre-Meeting Settings when Q&A is enabled.

### Character Limit in Q&A

To ensure readability and improve the viewer experience during Production, questions are now limited to 300 characters and answers to 250 characters. A helpful character counter is displayed next to each input field.

In addition to these improvements, some minor enhancements have been made, and a few bugs have been fixed. For more information regarding the AI Producer Control Room, please follow this [link](#).

Please contact us if you are interested in a demo of AI Producer, including our upcoming features.
