

# AI Producer Release Notes

2025.2

## Features & Improvements

### Support for 8 Simultaneous Presenters

AI Producer now supports up to 8 simultaneous presenters together with screen share. As before, one of these 8 presenters can be replaced with an Active Speaker Box to extend interactivity even further.

### Manual Mode Now Becomes Active Segment in Control Room

Active Segment will replace Manual Mode but will only be accessible from the Control Room. In the Control Room, there is now a toggle to explicitly switch between AI Mode and Manual Mode. Selecting a scene for the Active Segment in the Control Room will no longer move AI Producer into Manual Mode. AI Producer will use the selected scene but in other aspects remain in the mode selected and indicated by the AI Mode/Manual Mode toggle.

See [this tutorial](#) to learn more.

### Maximum Meeting Time Extended From 12 Hours to 30 Hours

The maximum time for an AI Producer Production is now extended from 12 hours to 30 hours, aligned with the maximum duration of any Teams meeting.

### User Settings in the Control Panel

User Settings, including Role and Name Overlays, can now be configured from the Presenters button in the Control Panel.

### Merge User in the Control Panel

The ability to merge users, for example when a presenter joins from an account other than the invited one, is now also available in the Control Panel.

### Trimming for OneDrive Recordings

Recordings of Productions with OneDrive as one of the destinations are now trimmed. This means the following periods will be automatically removed from recordings:

- The period before a Production starts (Prepare Mode)
- Break periods
- The period after the end-slate bumper starts
- In Education format, periods when someone other than the teacher is speaking, or longer periods of silence (e.g. when students are working independently)

### Login Options for Q&A

The Q&A attendee page can now be configured to require either a password-protected login or Microsoft 365 Single Sign-On. This is configured Pre-Meeting Settings and the Control Panel

### Sort Order for Questions

Producers can now sort questions by "Newest first", "Oldest first", or "Most likes from Attendee Feed".

### Messages to Presenters Removed

The option to send messages to other presenters has been temporarily removed, pending a redesign of the feature.

### Apply Branding to All Segments

The function to apply the branding of one segment to all others has been improved. When branding a segment, there is now a button that applies the branding of the currently edited segment to all existing segments and sets it as default for new ones.

### Access Pre-Meeting Settings from the Control Room

You can now access the Pre-Meeting Settings directly from the Control Room, making it easier to adjust configurations.

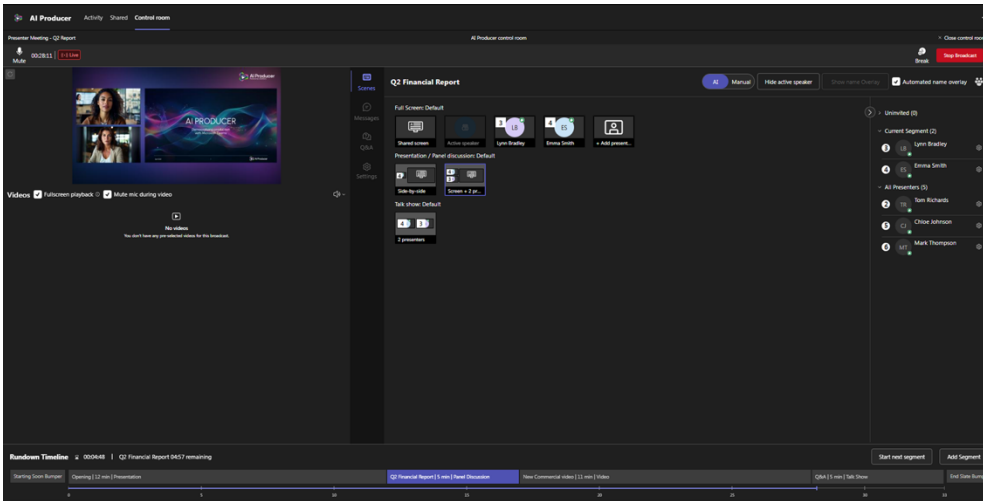

### Adjusted Position for Name Overlays

Name Overlays are now positioned lower and further to the left in the Production.

See page 3 for a visual overview of the updates to the Control Room and Control Panel. In addition to these improvements, some minor enhancements have been made, and a few bugs have been fixed.

Please contact us if you are interested in a demo of AI Producer, including our upcoming features.
