

AI Producer in Teams Release Notes

2026.3

Features & Improvements

Updated Pre-Meeting Settings Layout

Pre-Meeting Settings has been redesigned with a more streamlined layout for a clearer and more consistent setup experience.

Layout Set Enhancements

Apply Layout Set to All Segments

Producers can now apply a layout set to one segment and push it to all segments in the rundown. This works the same way as branding. Set it once, and it applies across your entire session.

Create Layout Set from Existing Template

When creating a new layout set, producers can now select an existing layout set as a starting point. This makes it faster to set up new layouts without starting from scratch every time.

Customizable Border for Video Boxes

Producers can now add a customizable border around presenter video boxes in their session. Choose any color and adjust the size to match your branding.

Additional Aspect Ratio Options for Layout Sets

Layout sets now support additional aspect ratios beyond 16:9 and 9:16, including 4:3, 1:1, and 8:9, making it easier to tailor sessions for different platforms and screen formats.

OneDrive Recording Enhancements

Watch the tutorial about OneDrive Recording enhancements [here](#)

Select OneDrive Recording Recipient

Producers can now choose which user receives the OneDrive recording directly from Pre-Meeting Settings. This setting is available for AI-Assisted Production, AI-Assisted Recording, and Education.

Copy Recording to Profile Video Library

Recordings can now be copied from Manage Recordings to a profile's video library. Previously, recordings could only be saved to your personal library. Copying to a profile requires Profile Admin access for the selected profile.

Intro and Outro Bumpers for Recordings

Producers can now add an intro and outro bumper to their OneDrive recording from Pre-Meeting Settings. The bumpers appear only in the recorded file and are not included in the live production.

Improved Trimming for OneDrive Recordings

OneDrive recordings are now processed and delivered faster after the production ends.

Control Room Enhancements

Name Overlay Selection Per Segment in Control Room

Producers can now configure which name overlay to use per segment directly from the control room. This is especially useful when a presenter has multiple name overlays assigned.

Updated User Cards

User cards in the control room have been updated with a new design

Renamed Settings and Profile Settings in Admin Portal

Settings is now called Videos/Branding/Destinations, and Profile Settings is now called Profile Management. The updated names better reflect the content of each section.

Copy Question in Q&A

Moderators can now copy a question directly from the Q&A panel.

Smarter AI Switching for Panel Discussion and Talk Show

The AI switching logic for both Panel Discussion and Talk Show has been updated to create a more dynamic and engaging production. Changes include smarter speaker transitions and improved split-screen behavior based on speaking activity.

In addition to these features and improvements, some minor enhancements have been made, and a few bugs have been fixed.
